

Revolutionizing Clean

The World's Most Advanced Pathogen & Odor Control Solutions

Scientifically-superior formulas eliminate dangerous germs and tough odors faster, safer, and better.

Used in healthcare, hospitality, law enforcement, automotive, transportation, restoration, sports and fitness, agriculture, and more...

ProKure V Disinfectants

ProKure V is a safe, effective, hospital-grade solution for cleaning, sanitizing, disinfecting and deodorizing. It rapidly kills germs, mold, and mildew with unbeatable strength. When combined with cool water, ProKure V generates a liquid solution of Chlorine Dioxide that will stop the toughest of pathogens.

The active ingredient in ProKure V kills hundreds of dangerous pathogens

- | | | | | |
|---------------|---------------|--------------|---------------|----------------|
| ▶ C. diff | ▶ Enterovirus | ▶ Herpes | ▶ MRSA | ▶ Polio |
| ▶ Calicivirus | ▶ H1N1 | ▶ HIV-1 | ▶ Norovirus | ▶ Salmonella |
| ▶ E. coli | ▶ Hantavirus | ▶ Influenza | ▶ Parvovirus | ▶ Staph |
| ▶ Ebola | ▶ Hepatitis | ▶ Legionella | ▶ Pseudomonas | ▶ Tuberculosis |

Competitive Advantage

No other solution provides these combined benefits and advantages

- ▶ Pouch technology ensures maximum strength and efficacy
- ▶ Rapid kill time; begins working in seconds
- ▶ Broad spectrum kill; effective against complex microorganisms
- ▶ Eliminates chemical contaminants
- ▶ Kills odor-causing bacteria, mold and mildew
- ▶ Prevents microbial resistance
- ▶ Works with organic compounds
- ▶ Not affected by pH
- ▶ Effective at high temperatures
- ▶ Safe on soft fabrics
- ▶ Color safe
- ▶ Deodorizes
- ▶ Waste stream compatible
- ▶ Leaves no harmful residues; creates no harmful or carcinogenic byproducts such as VOCs or THMs

Conveniently apply and store ProKure V liquid disinfectant using these accessories.

ProKure D Deodorizers

ProKure D Deodorizers provide unparalleled odor elimination and are available in both fast and extended release formulas. Upon contact with water, ProKure D generates a safe level of chlorine dioxide gas that eliminates odors.

ProKure D eliminates all unpleasant odors, regardless of their source

|-----------------|----------------------|
| ▶ K9 & Pets | ▶ Paint |
| ▶ Animal Waste | ▶ Pepper Spray |
| ▶ Bodily Fluids | ▶ Perspiration |
| ▶ Cannabis | ▶ Sewage |
| ▶ Cigarettes | ▶ Skunk |
| ▶ Chemicals | ▶ Smoke, Fire & Soot |
| ▶ Food | ▶ Tear Gas |
| ▶ Fuel | ▶ Tobacco |
| ▶ Grease Traps | ▶ Waste Receptacles |
| ▶ Human Waste | ▶ Urine |
| ▶ Mold & Mildew | ▶ Water Damage |

Why is ProKure Klean Revolutionary?

ProKure is powered by chlorine dioxide (also known as CD and ClO₂).

Before ProKure, CD was only available to a handful of companies that produced it on-site using large, expensive equipment.

Now, with a packet of ProKure, the unsurpassed power of CD is available to everyone—anywhere, anytime.

“Within one day, ProKure products eliminated years of mold, mildew and the residual odor in our showers. It has helped transform and improve our facilities.”

Scott Ritchey, Executive Director, Justa Center – A Center for the Elder Homeless

ProKure's Two Biggest Advantages:

SPEED & POWER

ProKure is Faster

ProKure V Kills Dangerous Pathogens in Seconds:
Other Disinfectants Take Up to 10 Minutes

Murine Norovirus Study Overview

Laboratory research conducted by Jan Biotech, Inc. in October, 2014 confirmed that at a concentration of 100 ppm, **ProKure V began to kill murine norovirus in 10 seconds. In only 30 seconds, ProKure V had both disinfected and sterilized the surface. In the world of disinfection, this is an incredibly impressive feat.**

Data from three independent studies showed that of four disinfectants, ProKure V was the only disinfectant able to kill the murine norovirus within 30 seconds and at such a low concentration. The other disinfectants tested were 90% ethanol, bleach (at 600 ppm) and a quaternary ammonium-based disinfectant (at 2800 ppm.) These studies demonstrate ProKure's two biggest benefits: speed and power.

ProKure is More Powerful

ProKure Outperforms Hospital's Current Disinfectant:
Which Would You Choose?

Disinfectant Comparison Study Overview

We can't see germs, so we need to have confidence our disinfectant works. ProKure V Works. Here's the proof. A study conducted in November, 2014 in a Phoenix, Arizona hospital showed that ProKure V significantly outperformed the hospital's current quaternary ammonium-based disinfectant. In fact, 96% of cultures from surfaces disinfected with ProKure V had lower microbe counts.

Below are pictures of two AGAR plates showing the cultured samples from ICU patient room bed rails. The plate on the left shows the microbes that remained after the surface was cleaned with the hospital's quat disinfectant. The plate on the right shows microbe counts from the bed rail cleaned with ProKure V.

Faster is Better

In our fast-paced world, time is at a premium. Many people don't realize that most disinfectants have to remain on a surface for up to ten minutes before they work. That's simply an unrealistic and impractical way to clean.

In fact, in reference to the disinfectants used in hospitals, the Centers for Disease Control (CDC) has stated: "...the contact time specified on the label [of disinfectants] is often too long to be practically followed."

ProKure is different. It works like you do... fast and efficiently.

"During 2012, our large community was hard hit with just about every type of bug going around the valley, including norovirus. We were getting extremely frustrated and knew we needed to do something different. In hopes of finding a better solution, we decided to give ProKure a try. It produced amazing results. This season we had far fewer illnesses and no outbreaks."

Stephanie Templeton, Executive Director, The Stratford Assisted Living Community
